PROJECT FACTSHEET

New Jersey Shore Protection, Lower Cape May Meadows – Cape May Point, NJ

October 2008

CONGRESSIONAL DISTRICTS: Rep. LoBiondo (NJ-2)

APPROPRIATION / PHASE:

Construction, General

BUSINESS PROGRAM:

Ecosystem Restoration, Flood and Coastal Storm Damage
Reduction (with Mitigation of Federal Navigation Project)

AUTHORITY: House Committee Resolution, December 10, 1987; Senate Committee Resolution, December 15, 1987

LOCATION: Along the southern Atlantic coast of New Jersey, extending approximately 2.5 miles to include Lower Cape May Meadows and the Borough of Cape May Point.

DESCRIPTION: Lower Cape May Meadows Project for the purposes of ecosystem restoration, flood and coastal storm damage reduction and navigation mitigation is approximately 350 acres in area containing Cape May Point State Park and the Nature Conservancy's Cape May Migratory Bird Refuge. The Meadows consists of important coastal freshwater wetlands, which are vital resting areas for shorebirds and birds of prey during their seasonal migration along the Atlantic flyway. The project restores and protects fish and wildlife habitat and provides flood and storm damage reduction throughout the entire study area.

The erosion of the shoreline and dune system in the Meadows has led to degraded fish and wildlife habitat and has reduced the productivity of the Meadows wetland ecosystem. Additionally, storm floodwaters from the Meadows inundate low-lying areas of Cape May Point, West Cape May, and Lower Township. Due to its unique and important location, strong support for restoring the habitat within the Meadows has been expressed by Federal, state, and other resource agencies and organizations including the Environmental Protection Agency, U.S. Fish and Wildlife Service, N.J. Department of Environmental Protection, NJ Audubon Society, the Nature Conservancy, and the Coastal America Program.

STATUS: FY04 funds were used for ecosystem restoration efforts including the application of herbicide for *phragmites* management. FY05 funds were used for initial beach nourishment construction at both the Meadows and Cape May Point in a joint contract with periodic nourishment of the Cape May Inlet to Lower Township project. The remainder of FY05 funds along with FY06 funds was used to award a contract on 21 September 2006 to complete the ecosystem restoration portion of the project. This project was completed on 15 June 2007. FY 08 funds are being used to award a contract for the 2nd periodic nourishment cycle. To date the FY 09 budget has not been approved. If this project receives funding in FY 09 project tasks will be determined based on the level of funding.

Lower Cape May Meadows – Cape May Point, NJ *(continued)*

TIMELINE	Start	Complete	Comments
Initial Construction		Jun 2007	Beachfill
Initial Construction		Jun 2007	Environmental Restoration
2 nd Periodic Nourishment Cycle	Dec 08 (Scheduled)
